NOTIFICATION DATE		DELIVERY MODE		
02/17/2010		ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

DocketingDept@young-thompson.com

Office Action Summary		Application No.	Applicant(s)
10/553,833		FRERE ET AL.	
Examiner	Art Unit		
CARALYNNE HELM	1615		

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 21 October 2009.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-5,7-11,13-15 and 17-234 is/are pending in the application.
 - 4a) Of the above claim(s) 2-5,7-11,13-15 and 19-34 is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1,17 and 18 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) Notice of Informal Patent Application
- 6) Other: _____

DETAILED ACTION

Note to Applicant: References to paragraphs in non-patent literature refer to full paragraphs (e.g. 'page 1 column 1 paragraph 1' refers to the first full paragraph on page 1 in column 1 of the reference).

MAINTAINED REJECTIONS

Election/Restrictions

To summarize the current election, applicant elected invention group III.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kumar (Journal of Pharmacy and Pharmaceutical Sciences 2000 3: 234-258) in view of Keller (previously cited) and Baker et al. (previously cited).

Kumar teaches particles for oral delivery (see page 234 column 2 paragraph 1). In one embodiment, lipid coated chitosan particles are taught. Specifically, chitosan and 5-fluorouricil are taught present in the core of a particle that is then coated with the lipid dipalmitoyl phosphatidyl choline (DPPC) (see page 247 column 2 lines 1-14). The dried, lipid coated particles are taught to have a diameters 250 nm to 300 nm (page 247 column 2 17-19; instant claim 1). Although not explicitly taught by Kumar, it is the position of the Examiner that the interaction between the chitosan core and the DPPC coating would meet the claim limitation of "weak bonds". As figure 9 of Kumar demonstrates, chitosan is a positively charged molecule. The phosphate groups of the DPPC are negatively charged, thus electrostatic interaction would likely occur between

these molecules and those of the chitosan. Further, hydrogen bonds are also possible between the carbonyl groups of the DPPC and the amines in the chitosan structure, which would also qualify as "weak bonds". Kumar et al. also does not explicitly teach the inclusion of these particles in a gastric protection with a lipophilic compound.

Keller teaches a drug containing particulate lipophilic vector that is included with a liquid carrier (propylene glycol) in a gelatin capsule, where the capsule is coated with an enteric polymeric coating (see column 4 lines 22-29 and example 1; instant claims 1 and 18). Such coatings are well known to withstand the acidic environment of the stomach, thereby protecting its cargo and facilitating its delivery in the intestine. Further Keller teaches that the gelatin capsules are negatively affected by the presence of water in the material they contain (see column 4 lines 5-6). Keller does not teach that this liquid carrier is lipophilic.

Baker et al. teach a drug containing lipophilic particulate composition that is taught to be delivered with a pharmaceutically acceptable carrier (see column 25 lines 14-27 and column 26 lines 3-4). Baker et al. go on to teach a set of glycols and oils that are particularly envisioned as such a carrier, where a variety of animal oils, mineral oils, and organic oils are named (see column 26 lines 6-10; instant claims 1 and 17).

The teachings of Keller et al. provide an enteric coated gelatin capsule that holds a liquid carrier (polyethylene glycol) and active containing particulates. Baker teaches equivalent liquid carriers for pharmaceutical particulates that include both glycols and oils. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine these teachings and use one of the oils taught by Baker et al.

instead of the glycol used as the liquid carrier in the gelatin capsule of Keller et al. It also would have been obvious to employ this gelatin capsule configuration of Baker et al. and Keller et al. in the invention as an oral carrier for the particles of Kumar since they are known for oral delivery. Further, gelatin capsules were well known in the art as oral carriers at the time of the invention and therefore were an option well within the technical grasp of one of ordinary skill in the art at the time of the invention. Based upon applicant's disclosure of the same components and configuration as a part of the invention (see instant specification paragraphs 35, 38-40, 43, 49, 53, and 57), it is the position of the Examiner that the composition of Kumar in view of Keller and Baker et al. would also have the same properties (allows said pharmacologically active substance to pass from the intestinal lumen to the blood, optionally via the interstitial fluid, without denaturation or degradation of said at least one pharmacologically active substance, and upon contact with microvilli present in the intestine during passage through the intestinal lumen, said chemical species detach from said matrix such that said matrix becomes an essentially hydrophilic nature). Therefore claims 1 and 17-18 are obvious over Kumar in view of Keller and Baker et al.

Response to Arguments

Applicants' arguments, filed October 21, 2009, have been fully considered.

Although portions of applicants' arguments are in contrast to the instant disclosure (e.g. chitosan envisioned as a lipophilic compound - see Remarks pg 3

paragraph 2), upon further consideration, the rejection under 35 USC 112, second paragraph is hereby withdrawn.

Regarding rejection under 35 USC 103(a):

Applicants argue that Kumar et al. does not teach that the DPPC coating detaches from their chitosan matrix, citing its taught stability in saline solution below 41.4°C. Stability when dispersed in an aqueous fluid has no bearing on the ability of the particles of Kumar et al. to be disrobed by microvilli. No particular strength of bond is required to enable the intestinal microvilli to act upon the vector as claimed. Applicants exemplify the vector invention as a core with a combination of compounds carrying positive and negative charge and a coating carrying a negative charge. Kumar et al. teach a core with a compound carrying a positive charge and a coating carrying a negative charge. In both instances electrostatic interactions would be expected to occur between the core and coating components. Applicants teach electrostatic bonds as "weak" bonds capable of being detached due to contact with microvilli upon passage through the intestinal wall (see instant specification paragraphs 39 and 42). Therefore, if the coating of applicants' exemplified vector has a coating capable of being detached due to contact with microvilli upon passage through the intestinal wall, then so does that of Kumar et al. since it has the same claimed components and weak bonds. Applicants provide no evidence that that the particles of Kumar et al. do not have this property, therefore the claims are still deemed obvious over Kumar et al. in view of Keller and Baker et al.

Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The rejections and/or objections detailed above are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Conclusion

No claim is allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CARALYNNE HELM whose telephone number is (571)270-3506. The examiner can normally be reached on Monday through Friday 9-5 (EDT).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert A. Wax can be reached on 571-272-0623. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
